

## FOR IMMEDIATE RELEASE

### **Powerhouse Building Solutions Announces distribution of Typar MetroWrap; a Commercial Building Wrap that Outperforms the Leading Brand**

*Port Coquitlam BC – May 14, 2010 – A top quality commercial building envelope product now available locally.*

Powerhouse Building Solutions Inc is pleased to now be able to provide a commercial building wrap solution that leads the pack in performance and reliability. Typar's MetroWrap is a commercial-grade wrap engineered specifically for the longer building cycles of multi-family dwellings and other commercial applications where a heavier wrap with superior tear strength, moisture vapor transmission and water holdout is required.

"Our goal is to bring new, innovative products to the market which contribute to drier buildings and prevent a recurrence of the 'leaky condo' syndrome which has cost home owners and economies in British Columbia and other areas of Canada billions of dollars," said Ross Power, President, Powerhouse Building Solutions.

In addition to superior performance in commercial construction, Typar earned the "Green Approved" label from National Association of Home Builders Research Center. MetroWrap is made of recycled contents, produces minimal VOC emissions, and its energy efficiency can reduce heating and cooling costs by as much as 20%.

Powerhouse is a distributor of premium rainscreen and building envelope products which work as a system to keep buildings dry, energy efficient, and mould-free. Their products appeal to engineers, architects, contractors and other industry professionals for their abilities to out-perform conventional products and methods, while also saving time and money on each project.
